📊 Marketing Campaign Analysis

Business Insights Report (Exploratory Data Analysis)

Objective:

The objective of this analysis was to explore customer data from a marketing campaign and identify which customer segments generate higher response rates. Instead of building a predictive model, the focus was on understanding *why* certain customers respond better and recommending how marketing budget should be allocated for maximum ROI.

🔍 Data Preparation

- Cleaned dataset and handled missing values
- Removed duplicate records
- Standardized categorical variables
- Created new features such as **Age**, **Age Group**, and **Total Spending**
- Calculated response rate across different customer segments

📈 Key Insights

- 🎓 **Education**
- Customers with higher education levels (especially **PhD holders**) showed higher response rates, indicating that well-educated customers may be more receptive to campaign messaging.
- 💰 **Income**
- Customers in the **higher income bracket (above ~68K)** demonstrated significantly better response rates. This suggests premium targeting strategies are more effective.
- 👶 **Age Group**
- The **18–30 age group** showed strong engagement, indicating younger customers are more responsive to marketing campaigns.
- 🌐 **Online Behavior**
- Customers with **5–10 web purchases** were more likely to respond, showing that digitally active customers are ideal targets for online campaigns.
- 💎 **Spending Level**
- Customers with higher total spending (₹1048–₹2525 range equivalent) showed greater campaign participation. High-value customers are more profitable and more responsive.

🎯 Business Recommendations

Based on the analysis, the marketing budget should:

✓ Focus on high-income customer segments
✓ Target digitally active customers through online campaigns

✓ Design loyalty and premium campaigns for high-spending customers
✓ Develop youth-focused marketing strategies for the 18–30 segment

Reallocating budget toward these high-response segments is expected to improve campaign efficiency, increase conversion rates, and maximize return on investment (ROI).

📌 Conclusion

The analysis clearly shows that customer segmentation plays a crucial role in marketing effectiveness. By strategically targeting high-income, digitally active, and high-spending customers, the company can significantly improve marketing performance and overall profitability.
